

SIMPLE CSS SECTECTORS

@Wajid Mohammed

Id selector

- The id selector uses the id attribute of an HTML element to select a specific element.
- To select an element with specified, write a hash (#) character, followed by the id of the element.

example

```
1  #container{
2      height: 50px;
3      width: 50px;
4  }
```

class selector

- The class selector selects HTML elements with a specific class attribute.
- To select elements with a specific class, write a period (.) character, followed by the class name.

example

```
1  .container{  
2      height: 50px;  
3      text-align: center;  
4  }  
5
```

universal selector

- The CSS rule below will affect every HTML element on the page:

example

```
1  * {  
2      margin: 10px;  
3      padding: 50px ;  
4  }
```

Grouping Selector

- The grouping selector selects all the HTML elements with the same style definitions.

example

```
1
2  h1 {
3      text-align: center;
4      color: red;
5  }
6
7  h2 {
8      text-align: center;
9      color: red;
10 }
11
12 p {
13     text-align: center;
14     color: red;
15 }
```

element selector

- The element selector selects HTML elements based on the element name.

example

```
1  p {  
2      text-align: center;  
3      color: red;  
4  }
```
